Summary

6 years of experience designing and developing enterprise systems in the insurance industry
4 years as a tech lead, architecting systems, implementing best practices, and leading teams

Stack

Java, Spring-Boot, JEE, EJB, Spring, Servlets, REST, JDBC, JPA, JMS, JSON, Nodejs, Typescript, JSP, SQL, Python, jBoss, Tomcat, Bash, Powershell, XML, Javascript, Maven, Ant, Git, Gosu

Employment History

Illumifin

Software Engineer

3/21 - 4/25

Eden Prairie, MN / Greensboro, SC / Woodbury, MN

System Architecture

- Accountable for all design and development of internal payment processing and access management systems
- Continually drove to improve the applications I oversaw, team members and myself
- Lead team of several developers in daily standup, sprint planning, review and retrospective
- Provided architectural oversight to new feature's MVC component design within my domain and participated review of intersystem feature design
- Modularized monolith into a portable application architecture and build process
- Redefined and documented large, opaque services to smaller, simpler and more structured services reducing the system context needed by service consumers
- Coordinated development and release of multisystem interdependencies

Project Work

- Gathered requirements, designed and developed features in a highly transactional system
- Identified, analyzed and implemented new design patterns to streamline project execution
- Improved system's business value by making surgical changes to safely add functionality in existing code while communicating the technical changes to non-technical team members
- Developed and implemented new patterns within legacy code to allow the Spock test framework to be introduced and become a valuable tool in the code base
- Provided reports for internal and external audits of data and access compliance

CI/CD and Process Automation

- Introduced, organized, developed and implemented new initiatives to continuously build, test and deploy homegrown and vendor applications to facilitate changes
- Accountable for change management compliance of applications in domain area
- Reduced support time by writing bash and powershell scripts to facilitate daily support tasks in 160+ environments

Federated Mutual Insurance Company

Systems Developer

6/19 - 3/21

Owatonna, MN

Project Work

- Executed development for new print (documents/letters) that directly benefited company initiatives in the Policy Admin systems
- Researched and resolved policy rating issues in order to correctly rate policies
- Oversaw the conversion and loading of data from legacy mainframe application (DB2) to newly developed Java web app (SQL Server)

Unit Tests

- Improved system stability by revitalizing legacy junit tests and empowering team members to add junit tests to be run in our CI pipeline

Mentoring

- Trained and mentored new hire team members, contractors and intra-company transfers

Education

University of Wisconsin La Crosse

B.S. Computer Science

2019
